

- (e) 5-50wt%, relative to the total weight of the composition, of one or more monofunctional diluents selected from the group consisting of alkyl (meth)acrylate monomers, N-vinyl functional diluents, and vinyl ether functional diluents;

wherein said composition, after cure, has

a dielectric dissipation factor at 60 Hz and 150°C of lower than about 0.2; and at least one Tg of below 20°C.

~~36.~~ (Amended) The composition of claim ~~27~~¹, wherein said one or more monofunctional diluents includes an acrylate functional diluent.

~~37.~~ (Amended) The composition of claim ~~27~~¹, wherein said (meth)acrylate ester is present in an amount of from about 0.2 % by weight to about 5 % by weight, relative to the total composition.

~~38.~~ (Amended) The composition of claim ~~27~~¹, wherein
(i) the urethane oligomer is present in an amount of from about 20 % by weight to about 80 % by weight, relative to the total composition, and
(ii) the one or more monofunctional diluents and the one or more polyfunctional diluents are, combined, present in an amount of from about 20 % by weight to about 80 % by weight, relative to the total composition.

~~39.~~ (Amended) The composition of claim ~~38~~¹⁰, wherein said (meth)acrylate ester is present in an amount of from about 0.2 % by weight to about 5 % by weight, relative to the total composition.

~~43.~~ (Amended) The composition of claim ~~27~~¹, wherein said (meth)acrylate ester is present in an amount of from about 0.2 % by weight to about 4 % by weight, relative to the total composition.

~~44.~~ (Amended) The composition of claim ~~27~~¹, wherein the urethane oligomer is present in an amount of from about 30 % by weight to about 65 % by weight, said one or more monoacrylate functional diluents is present in an amount of from about 10 % by weight to about 50
